SEDIMENT

The diagram shows a cross-section of a geological feature. A dark blue horizontal line represents the ground surface. Below this line is a brown rectangular area labeled "SEDIMENT". Above the surface line, a light blue shaded region is bounded by a dark blue curved line, forming a dome shape. The label ϕ_i is placed within this shaded region. To the left of the dome, the label ϕ_a is present. Above the dome, the label $\phi_i = 0.5$ is shown. On the right side of the dome, a dashed orange line extends from the surface line upwards and to the left. At the point where this dashed line meets the surface, a small black dot is marked. An arc is drawn between the surface line and the dashed line at this point, labeled with the Greek letter θ .
